

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

DB2 z DevOps and Cloud Provisioning

Patrick Bossman

Agenda

- Sept. Db2NightShow got Irma'd
- Background
- Automated provisioning scenarios
- Automated deployment scenarios
- Strategic direction
- Q & A

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Irma'd - before

- Moved the house
- Loaded the pets
- Hope for the best...

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Irma'd - after

- Fire up the chain saw!
- Lot's of debris
- No storm surge...
- Dodged a bullet.
- 20 miles difference in storm track is a big deal...

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

DevOps and Cloud Provisioning Goals - Developer

Improve developer productivity via self-services

- Provision
- Configure
- Manage
- Use DB2 for z/OS resources

Dramatically reduce the occasions where developer is waiting on administrator.

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

DevOps and Cloud Provisioning Goals - DBA

Improve administrators productivity

- Focus on database design, tuning activities
- Design automated business rule enforcement
- Deployment integrated review and approval of changes and deployment processes
- Design developer self-services for provisioning, management, and housekeeping activities

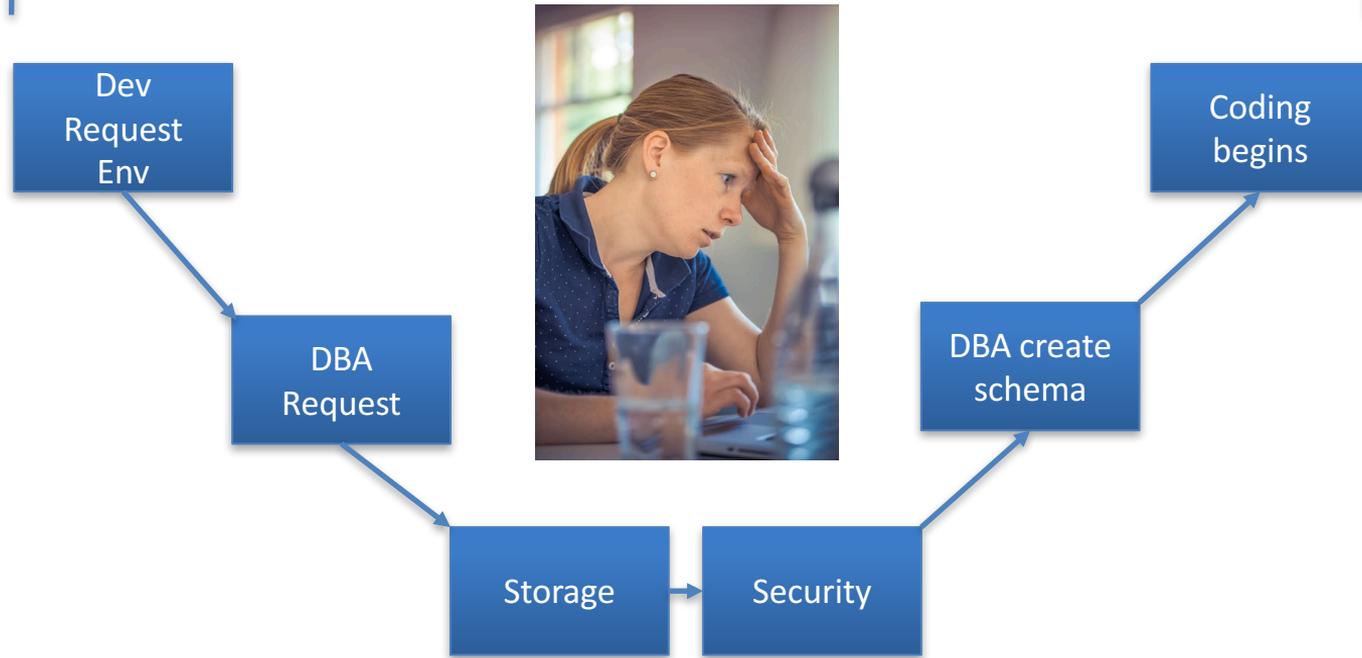

Emphasis:

- Empower developers via fully automated and/or self-service capabilities.
- DBA is transforming into "database and database self-services" developer.

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Waiting, where innovation dies

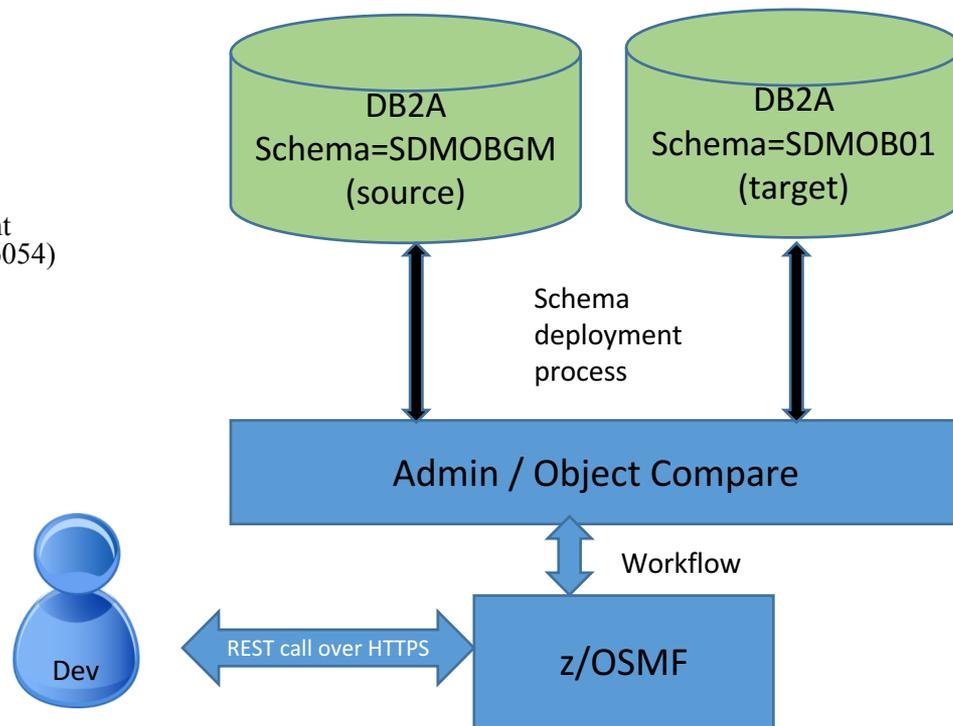

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Provision developer environment

“Create schema like” service

- Specify source environment and schema, target subsystem and schema
- Rip source, provision target
- Utilize REST enabled IBM Change Management Solution Pack (V11.2 + PI67731, PI72396, PI76054)
 - DB2 z: PI79222 (V11), PI73492 (V12)
- Useful for
 - CD/CI fully automated tests
 - Self-service schema provisioning portal

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Automated application deployments with schema changes

An optimized and automated process for rapid deployment of applications and database schema changes to simplify and speed the delivery of critical operational environments for exceptional business value

SPEED

- Reduce time and cost to deploy application changes
- Deploy more frequently with more autonomy and control
- Automated. Accelerated.

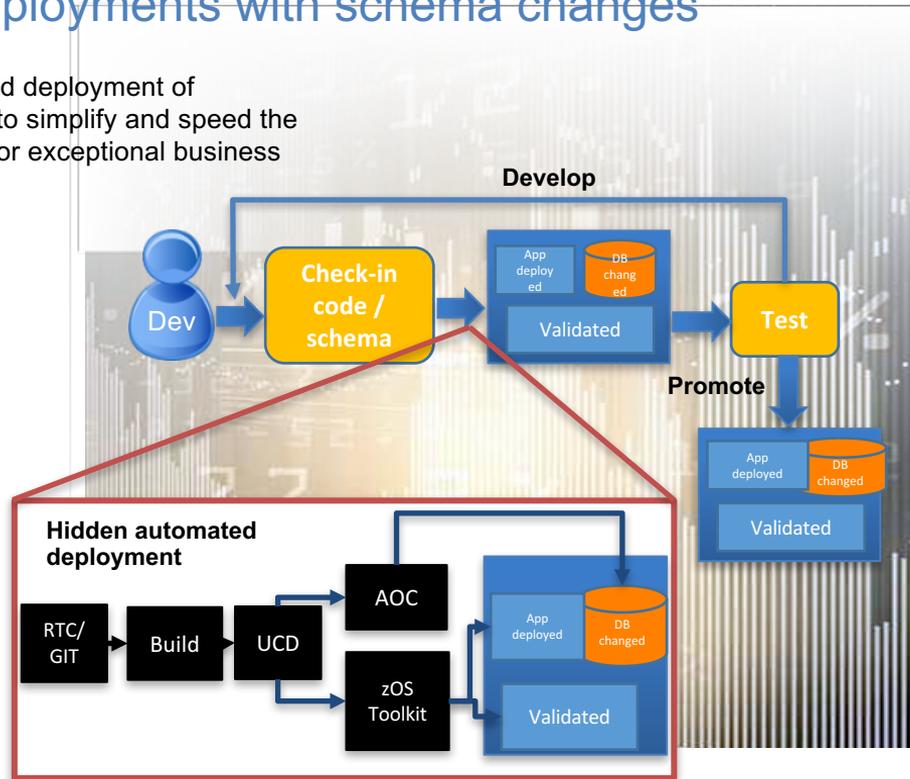

SIMPLICITY

- Reduce errors of manual process
- Frees up resources by allowing other users to deploy
- Collaborative. Accurate.

SECURITY

- Safeguard valuable assets under the control and security of DB2 for z/OS
- Transparent and auditable review built into process
- Protected. Secured.

Delivered via IBM Change Management Solution Pack
4Q2016 Generally Available

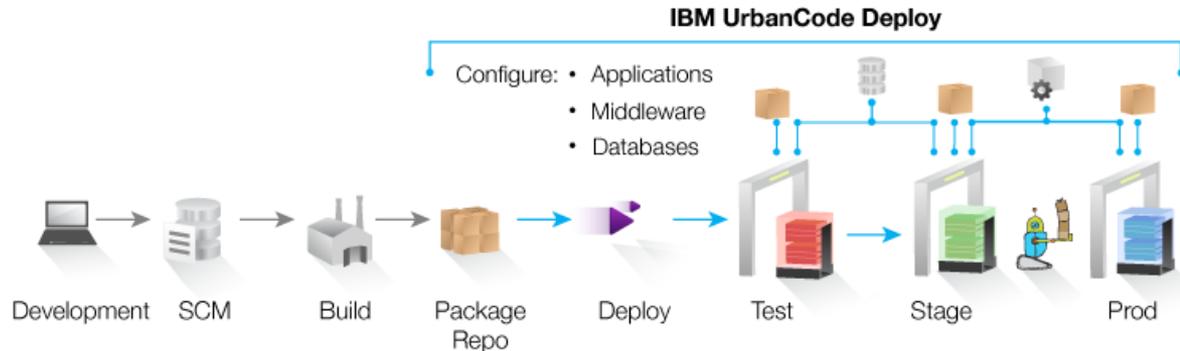

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

What is UrbanCode Deploy (UCD, uDeploy)

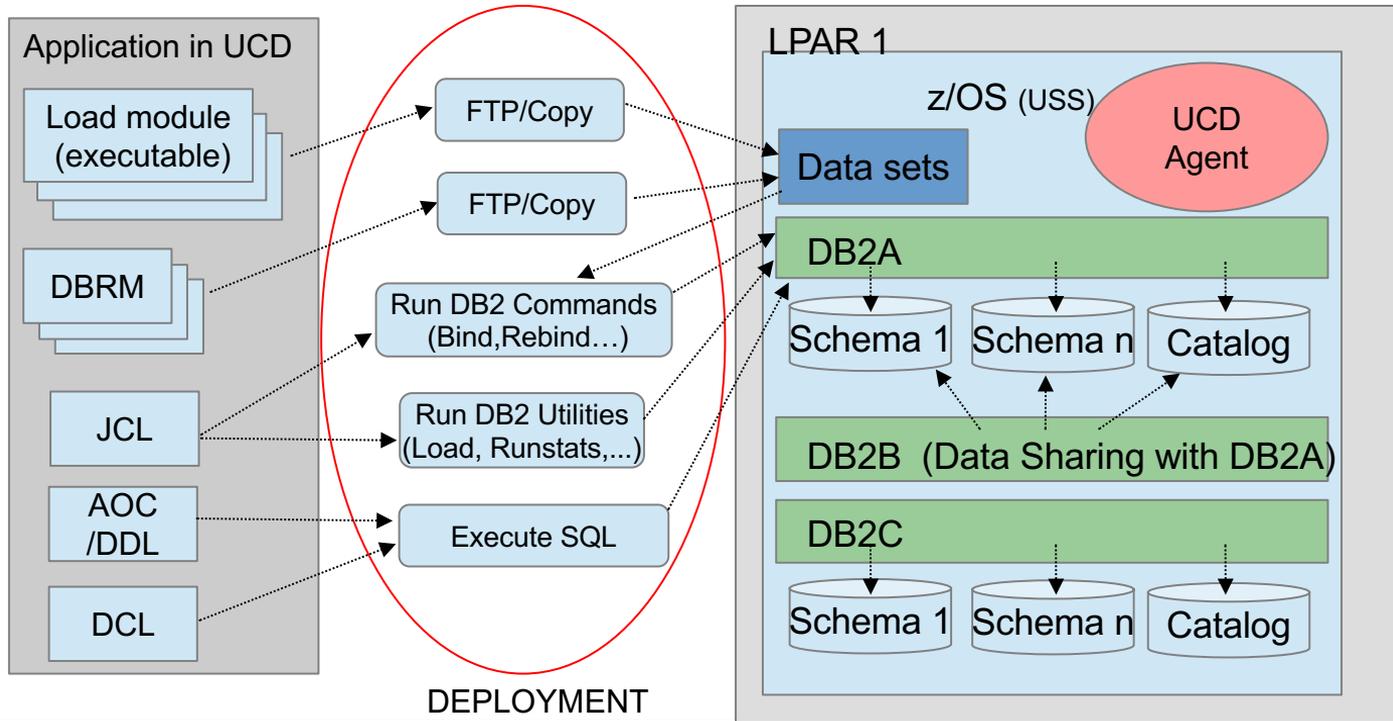

- Application Deployment Automation tool
 - Automates deployment and rollback of applications
 - Orchestrates complex deployments of applications and configurations
 - Designed to handle development and production deployments
 - Provides “self-service” ability to deploy a particular app version into particular env

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

DB2 application deployment in UCD

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Pre-Requisites

- Pre-requisites
 - IBM Urbancode Deploy server 6.2, agent, and toolkit
 - IBM zOSMF server version 2.2
 - IBM DB2 Change Management Solution Pack V11.2 + PI67731, PI72396, PI76054)
 - JDBC driver, RACF PassTicket jar files on USS
 - Urbancode plugins
 - File Utils
 - zOS Utility
 - zOSMF

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

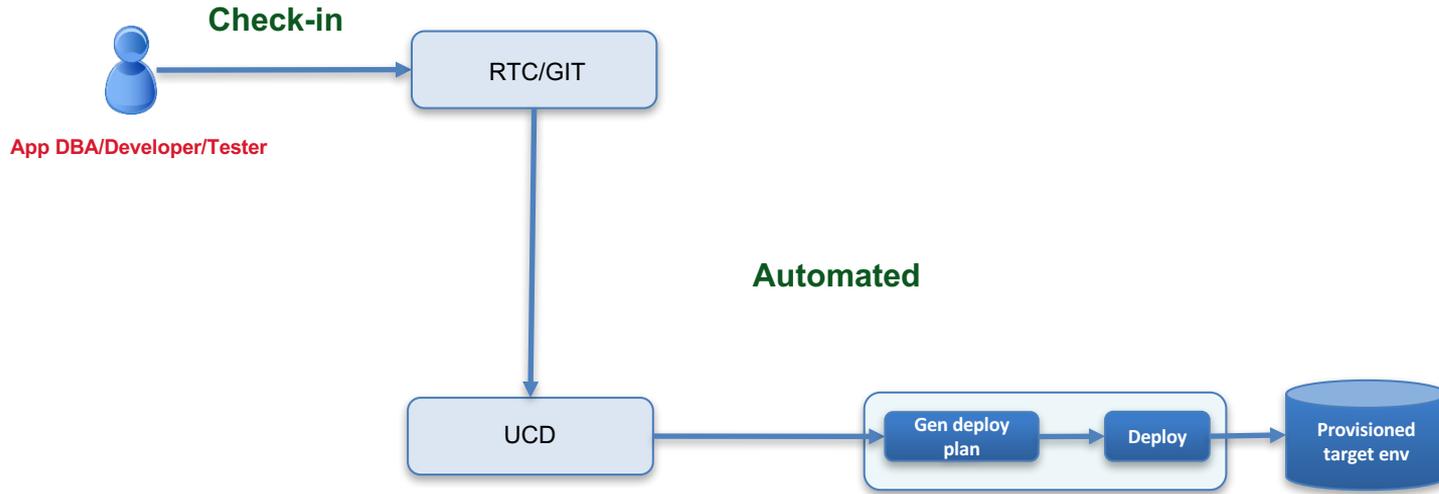

Demo 1 – sandbox schema change

- Sandbox environment schema change
 - Generate schema modification
 - We're using direct edit / check in of DDL
 - Other schema change methods are possible.

Architecture Overview

* Anyone that needs to get notified can be notified automatically

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Team environment schema change scenario

- 8 developer team
 1. Developer makes change in sandbox
 2. Merges change into the team branch
 1. Deploy to CI server
 2. Automated checks
 3. (Efficient) reviews/approvals
 3. Commit to team schema
 4. Automated notification & push/pull requests to team

Database versioning

Claims
development team

Claims Dev
Gold Master

- Provisioning source
- Data refresh source
- Statistics refresh source...

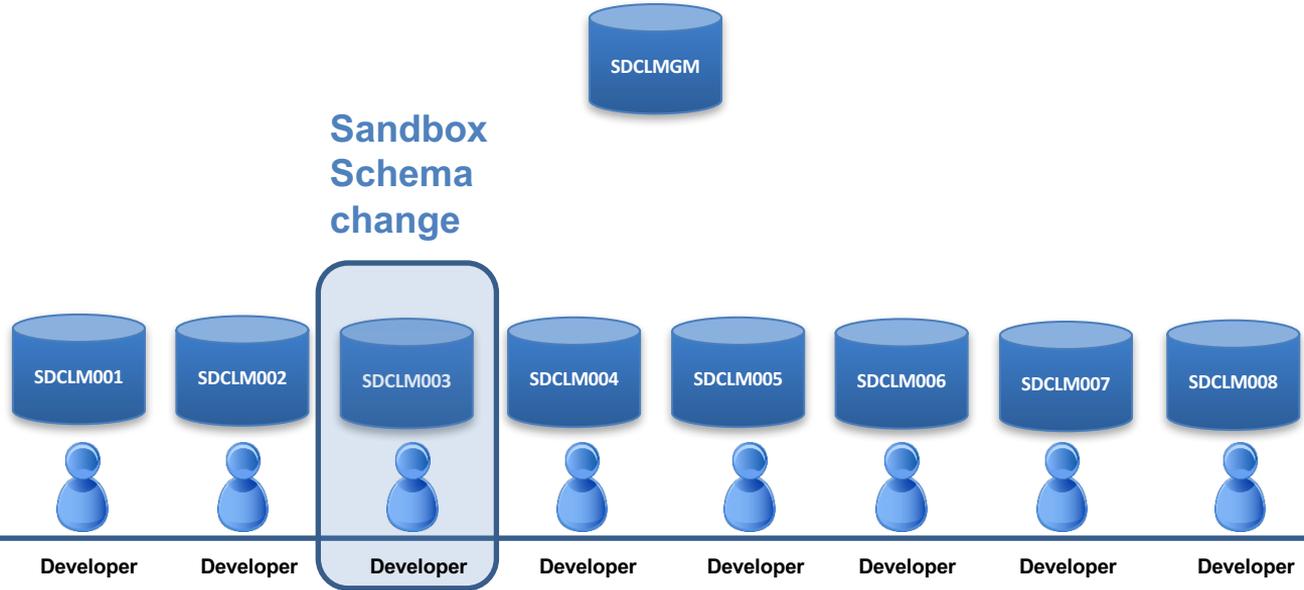

Developer
sandboxes

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Developer changes database

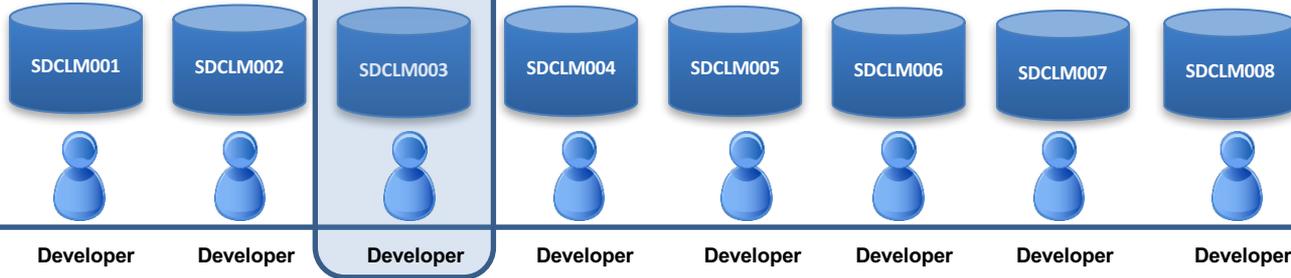

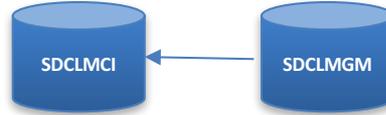

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Merge to team branch – create CI schema

Create CI schema

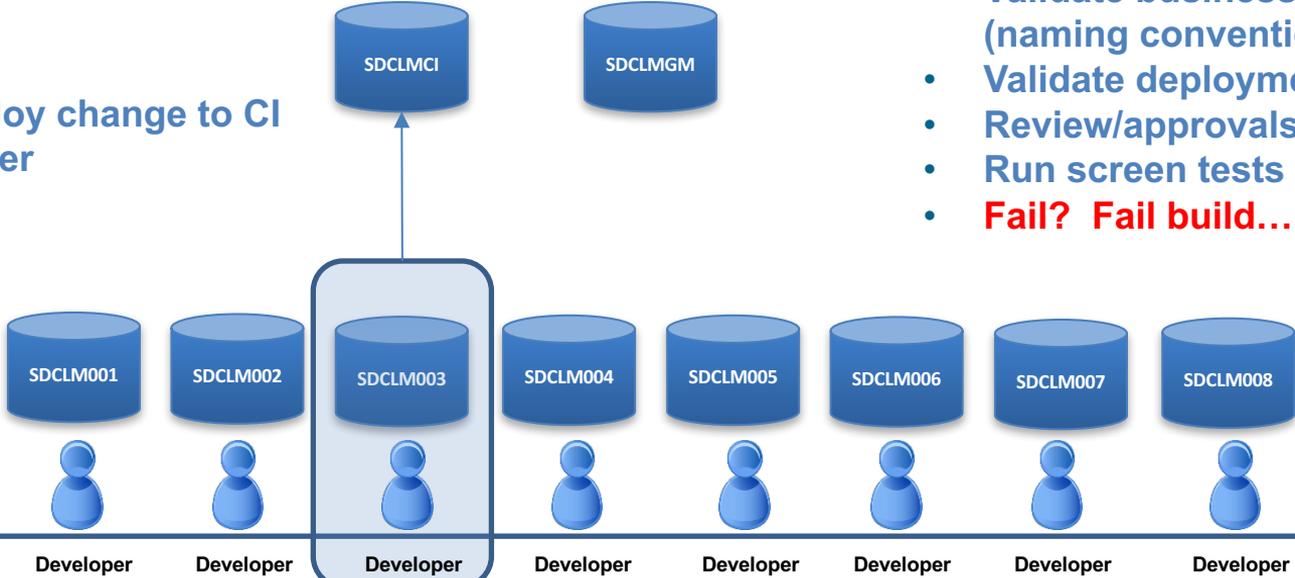

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Merge to team branch – deploy/test in CI

Deploy change to CI server

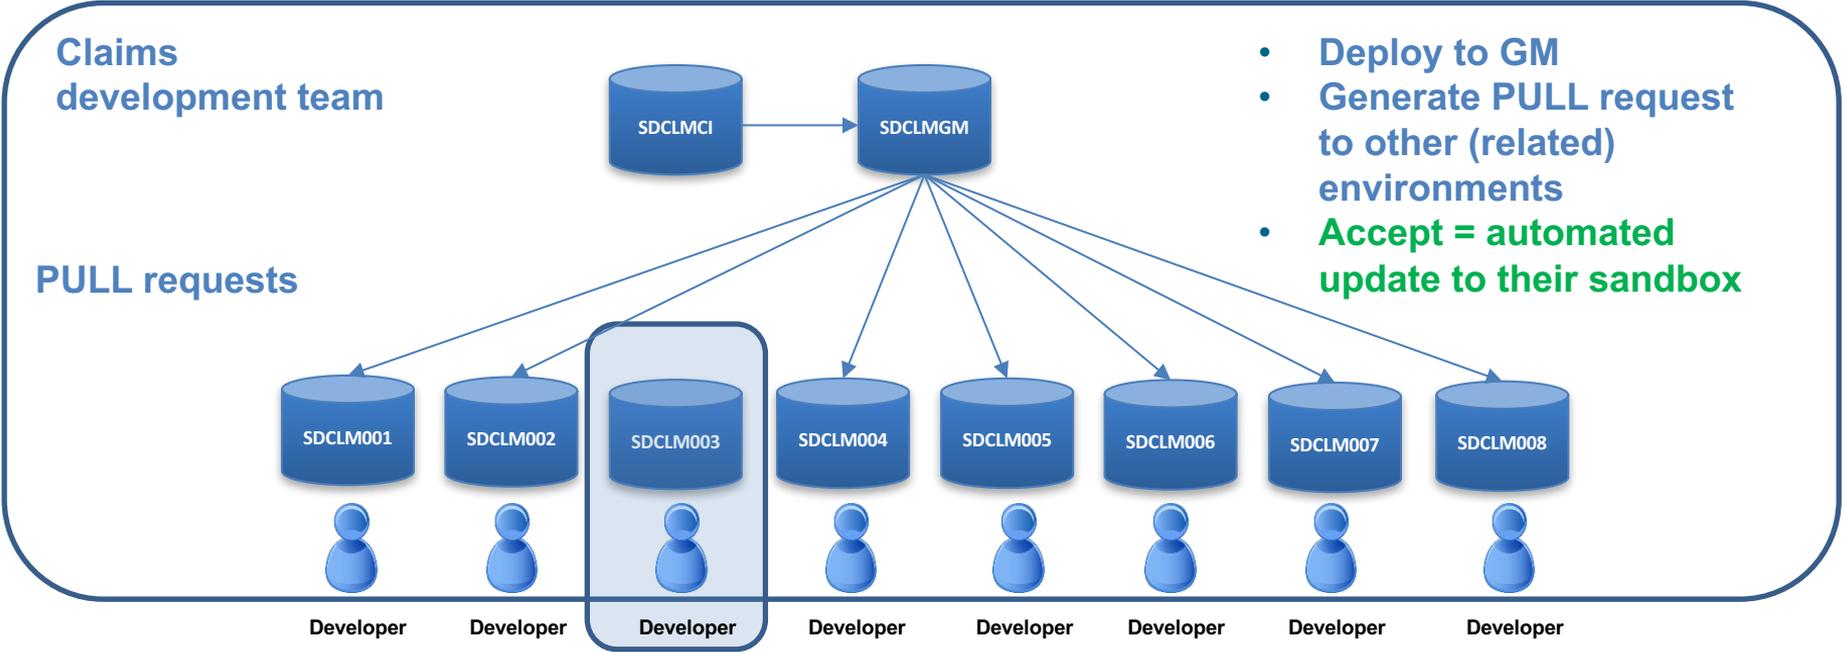

- Validate business rules (naming convention, etc)
- Validate deployment
- Review/approvals
- Run screen tests
- **Fail? Fail build...**

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Merge to team branch – update GM Auto-notify team

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Future DB2 for z/OS DBaaS capabilities under consideration

- Deliver REST services to support **developer** self-service...
 - De-provision a DB2 application environment
 - Configure automated backups
 - Snapshot backup/restore services
 - Monitor/add/remove storage
 - Data refresh
 - Statistics refresh
 - ...

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

DB2 12 — The ultimate enterprise database for business-critical transactions and analytics

Thank you!
